Retail | Catalog | Commercial

Consistency and Value to Minimize Your Pressroom Costs.

Our **CENTRAHEAT** product lines were designed to deliver optimal lithographic performance for a variety of applications. By customizing vehicle systems for printing application, we are able to provide a product best suited for your needs. We balance the efficiencies of scale manufacturing with customization to enhance your customer experience, and to help you find your **EDGE**.

THE BENEFITS

Excellent Transfer and Fast Plate Cleanup

User Friendly Inks with Excellent Press Stability

Great Blanket Release for Reduced Wash-ups and Less Waste

Terrific Rub and Scuff Characteristics on Matte and High Hold-Out Stocks

CENTRAHEAT FIND YOUR EDGE

INSERTEDGE

Low tack inks for newsprint, SC, LWC substrates.

Designed to cut waste through reduced reduced blanket washes and linting.

VERSAEDGE

Mid-High tack inks for SC, Matte, Coated substrates up to 100 LBS.

User friendly with a focus on providing excellent press stability, gloss, and the versatility to run on a variety of substrates.

RAPIDEDGE

Mid tack inks for a variety of substrates and high speed presses.

Our special proprietary vehicle system provides excellent press stability and mist control at the highest speeds.

CENTRALink
CORPORATION

MORE THAN JUST INK.

THE CENTRAL INK DIFFERENCE

Our Manufacturing & Formulation Process Redefines The Standard

Our formulations utilize dry grind dispersion manufacturing, a process that allows us to provide an ink with unmatched performance and value.

Our dry grind technology allows us to manufacture an ink with the finest of grind, giving our inks enhanced transfer, improved color control, smoother laydown, and a fast plate cleanup.

Dry grind technology provides flexibility in our formulation which results in a wide ink and water window. Our heatset inks will print clear, come up to color fast, and provide an exceptional gloss.

We manage process and quality controls through every step of the value chain, from incoming raw materials, intermediate production, and final blend, with our industry leading quality assurance program.

Production managers who need integrated pressroom solutions depend on Central Ink to minimize problems by maximizing product consistency. We have the industry's only 24-hour Quality Assurance process, which allows us to identify concerns our competitors may miss.
